

## Laminators from Royal Sovereign

Cold lamination is ideal for use with media and inks that are sensitive to heat. Designed to protect and enhance a wide variety of inkjet prints, cold laminators use pressure sensitive films and mounting adhesives.

Royal Sovereign's RSC-1400C laminates pressure sensitive film up to 55" wide at a rate of 16.4' per minute. It can mount or laminate individual or multiple copies of posters, POP signs, training aids, rigid or flexible signage, photos and floor graphics. Royal Sovereign laminators are easy to use with simple one button operation. A remote control and foot pedal allow hands-free operation. The RSC series laminators are available in 55" and 65" widths.

## FDC Announces Availability of 3M Scotchlite™ Graphic Film—Series 5100

3M's Scotchlite Graphic Film - Series 5100 is now available as FDC's 5100 series. It is a 7 mil, true Engineer Grade gloss film with up to seven years durability. The film features a permanent clear adhesive and Polyethylene-coated paper liner. Series 5100 is offered in white as well as 14 standard colors. Sizes include 48", 24" and 15" widths in 50 and 10 yard rolls.

FDC 5100 can be used in the most demanding graphic applications. It easily cuts and weeds characters as small as one inch and is well suited for cut letters, decals, vehicle markings and graphics, and non-regulated signage. It is available in punched 15" and 30" widths as well as non-punched sizes.

Currently, FDC Series 5100 is available by special order. Give us a call for more information. Samples (15" x 36") are available on request.

### Dixie Neon Holiday Schedule

**Christmas** Thursday, December 24  
**Friday, December 25**  
**New Years** Friday, January 1

## Akzo Grip-Gard® Basecoat System for the Sign Industry Overview of Complete System

Last month, our What's Up article introduced the new Grip Gard BC Basecoat—the first true basecoat clearcoat paint system designed specifically to meet the color, application and quality demands of the sign and exhibit industry.

This month's article is a short overview of the three product options: **Grip-Gard BC Basecoat**, **Grip-Gard BC Single Stage** and **Grip-Gard BC Interior** - all from one set of toners, reducers and hardener.

**Grip-Gard BC Basecoat** - because it was designed to be a true basecoat, it provides the best coverage and the fastest dry and tape times in the market. For you, this means extremely fast production, particularly on multi-color signs. Grip-Gard BC Basecoat also provides the best metallic orientation, the widest range of colors and the easiest application properties.

**Grip-Gard BC Single Stage** - Just substitute the Single Stage Binder and you have the fastest single stage 2K urethane system in the market. The color range and ease of application are unmatched for a single stage urethane — and no clearcoat is required.

**Grip-Gard BC Interior** - Just substitute the Interior Satin or Matte Binders and you have an extremely fast system designed to produce signs for interior use. Excellent color fastness and resistance to cleaners is achieved and - no clearcoat.

Check out our January 2010 What's Up for more details about this comprehensive new product line from Akzo.
