

Transfer Tape From AMERICAN BILRITE INC.

The TransferRite **Ultra** family of tape products includes both standard and clear tapes featuring low, medium and high tack. The superior adhesive formulation for these products reduces wrinkling, tunneling and edge lift. We stock selected products and sizes and can special order others at your request.

Standard

Product #	Tack	What We Stock
582U	Med	12" - 48" x 300'
592U	High	2.25" - 10.5" x 300'

ULTRA CLEAR Available in 12" to 48" widths

Product #	Tack	What We Stock
1310	Med	24" & 48" x 300'
1320	High	2.25" - 10.5" x 300' special order

Making the Right Choice For Your Project

Why Clear Tape? It is a little more expensive but it's great for light and multiple color alignments, drop shadows, small letters and other intricate design elements.

Why High Tack? It is recommended for projects with small, intricate design elements because it ensures that all are picked up and transferred properly.

Why Medium Tack—It's a general purpose workhorse and great for large graphics because it doesn't tear and is easier to pull off the graphic. It's recommended for use on intermediate films, banner material and corrugated plastic.

2010 ISA International Sign Expo

The ISA International Sign Expo 2010 will be held on April 8 - 10 in Orlando, FL. More than 60 educational workshops, a massive exhibit hall, networking events, a New Product Showcase competition, a Green Product Showcase, and a vehicle wrap competition should keep you busy.

Akzo Grip-Gard® Basecoat System for the Sign Industry **** Interior Binders ***

SIGN FINISHES AZKO's new Grip-Gard BC System gives you three different product options (Basecoat, Single Stage and Interior) with one set of toners, reducers and hardeners. In November, our What's Up article reviewed the features of the Grip-Gard BC Basecoat. In December, we provided a short overview of the three product options that comprise the **Grip-Gard BC Complete System**. This month the article describes the Interior Option: **Grip-Gard BC Interior Binders**. Next month we will feature **Grip-Gard BC Single Stage**.

Grip-Gard BC Interior Binders provides the option of converting the Grip-Gard BC toners into extremely fast drying interior coating without the need for a clearcoat. The binders come in matte and gloss which can be blended to achieve the desired gloss level.

Grip-Gard BC Interior uses the same toners, hardeners and reducers as the Basecoat, eliminating the need for costly additional inventory. The Interior Coatings offer a wide range of solid, metallic and pearl colors that can be directly sprayed onto ADA compliant photopolymer as well as most common plastics and any properly primed metal surface. They have excellent color fastness and resistance to household cleaners and marring.

FYI, we have inventory on all products in the Grip-Gard BC Basecoat System as well as an available mixing station.

Call Larry or Vic for more details or to schedule a visit to your shop for a full review of this exciting AKZO product line.

If you want to review the past What's Up articles and no longer have the November and December issues, you can find them on our website at www.dixieneon.com. Additional information is also available on AKZO's website at www.signfinishes.com.
